

CONSTRUCTION SITES, MANUFACTURING SITES, PORTS AND EVENT AREAS SAFER WITH NEW FULL-HEIGHT TURNSTILE FROM CAME

The Treviso-based company's BT Roof turnstile is a complete and versatile system suitable for a variety of urban applications, thanks in particular to the roof and vertical paneling to which various identification and access-enabling technologies can be applied.

The security of public venues, such as event areas and sports centers, and workplaces, such as manufacturing and construction sites, has always been a priority for operators, security managers and institutions. That's why CAME - a world-leader Made in Italy company operating in the field of integrated solutions designed for the automation, control and security of residential, public and business environments - has designed a new model of full-height turnstile that can be adapted to various application contexts and further expands the range of access control solutions: BT Roof.

This new model, with its sturdy structure, differs in that it has a built-in roof, making it a complete system perfect for outdoor use as it can offer shelter from the weather. Among other things, BT Roof can be fitted with a raised platform, making it easy to install and later remove - such as at temporary events-as well as enabling integration with [CAME access control](#) solutions - such as the ACS01 software - or third-party software to safely manage entry and exit.

Another plus of this CAME turnstile, is the presence of large (260 mm) paneled columns where various types of recognition and entry-enabling devices can be installed, extremely useful when managing venues with a high influx or specific identification requirements: such as various types of badge and code readers, video intercom systems, barcode or QR code ticket readers, and much more.

*"The versatility of use of this turnstile," commented **Paolo Marini, General Manager of CAME Italia**, "and its construction features are exactly what we aspire to when we design our products. We always have a broader vision in mind made up of adaptable and integrable CAME or third-party solutions, in line with the team's tailor-made approach "[Progetto Spazi](#)". A team composed of professionals with mixed and highly qualified skills that provides customers with all the support they need to implement the solution that best fits their business needs and requirements, throughout the project from programming-engineering to post-sales."*

Adding to the versatility of the turnstile, which is available in the models [BT Roof 300](#) and [BT Roof 300D](#) are the two single-entry and double-entry, 3-sector versions with two-way electromechanical or motorized operation, status, passage, and LED lighting indicators. The turnstile can also be customized, with painting of the structure and the rotor, a combination of steel and paint, or both in stainless steel. In addition, given the application areas, in the event of a power outage with the "Fail Safe" function, the passageway can be freed by allowing the central rotor to move in both directions or, as needed, blocking only one direction at a time.

CAME

CAME is a leading global brand for high-quality technological solutions and products for automations, smart homes, access control and security and parking systems that can improve the lives of the people who use them and the work of professionals.

With more than 50 years of history behind it, and even longer experience thanks to the companies that now belong to it, the Group founded by Paolo Menuzzo, now President of the holding company, is headquartered in Dosson di Casier, in the province of Treviso, and owns 10 manufacturing sites in Italy, France, Spain, UK, Turkey, and Brazil. Andrea Menuzzo, son of the founder, is the Chairman and CEO of CAME S.p.A. The company has over 2200 employees, serves the market with more than 25 branches and 40 warehouses around the world, and operates in over 110 countries worldwide through partners and distributors with an integrated and global vision. In 2023, it generated a turnover of €309 million.
